TREE AND SHRUB COLLECTION

OAK Wood - building on large numbers of oaks from around the world.

EUCALYPTS - There are a limited number of varieties of Eucalypts that will grow here but they have been chosen to see how they develop in this part of the world with the intention of using the more successful varieties for commercial use, be it for biomass, fencing, milling or firewood.

LIME - "Henryana" is a very special tree but the collection is being added to year on year.

SORBUS/MALUS/BIRCH/ALDER - These are spread all over the arboretum and a considerable collection has been established.

MAGNOLIAS - These grow well in Moray but there are not many around so we are establishing a collection.

There are many unusual trees from around the world which has been established in the wood.

# BURGIE ARBORETUM WOODLAND GARDEN

### HISTORY

Burgie Estate was in the ownership of the Dunbar Family from the mid 16th Century until 1908. Burgie House was built in the mid 19th Century but was added onto in 1910 by the Thomson's who bought it two years previously. The Estate consisted of several thousands of acres but now consists of just over 1000 acres. The Arboretum was started in the 70's; but due to several factors was not progressed until 2008. One of the reasons for progress was the start of Dutch Elm disease. A very large proportion of the wood was Elm and because it was such an eye sore the present owner made the decision to "clear it up." Now the Arboretum has been split into zones and it is the intention to try and produce colour all through the year as opposed to just Spring and Autumn. Work is in progress but with limited resources and labour, progress is slow. Most of the plants are grown from seed collected by the owner.
